

You can edit these SVGs in any vector graphics editor.

That said, they were originally produced using Inkscape, which I highly recommend:

<https://inkscape.org/>

The equations were made using the texttext plugin for Inkscape:

<https://texttext.github.io/texttext/>

If you install these, you will be able to edit the equations. The text in the equations is in sans-serif (which is not the default). To recreate this, add the following line to the TextText preamble:

```
\renewcommand{\familydefault}{\sfdefault}
```
